

Retail One training course

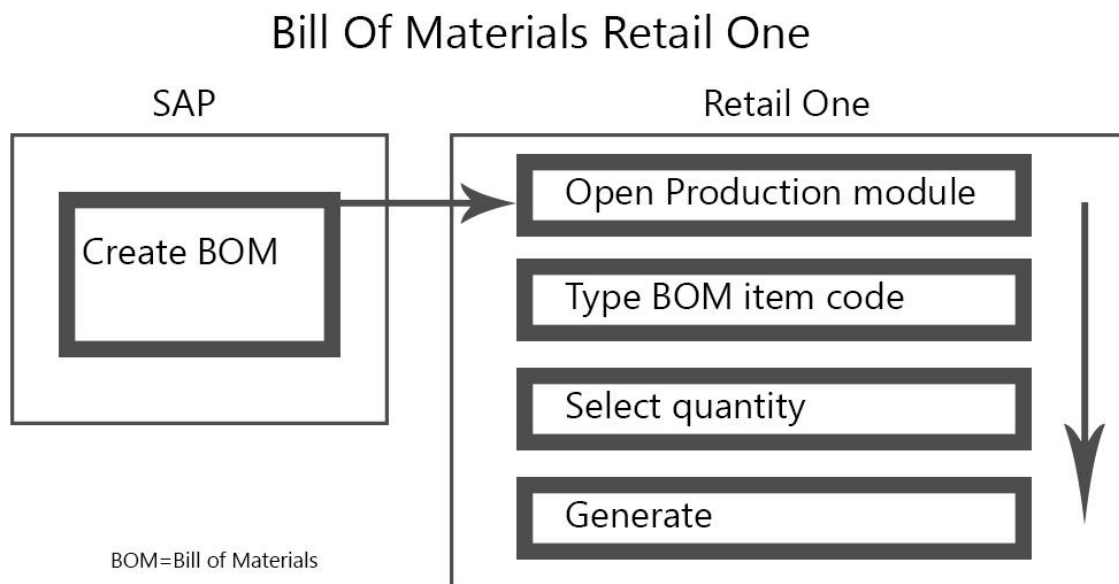

BILL OF MATERIALS

SOLUONE

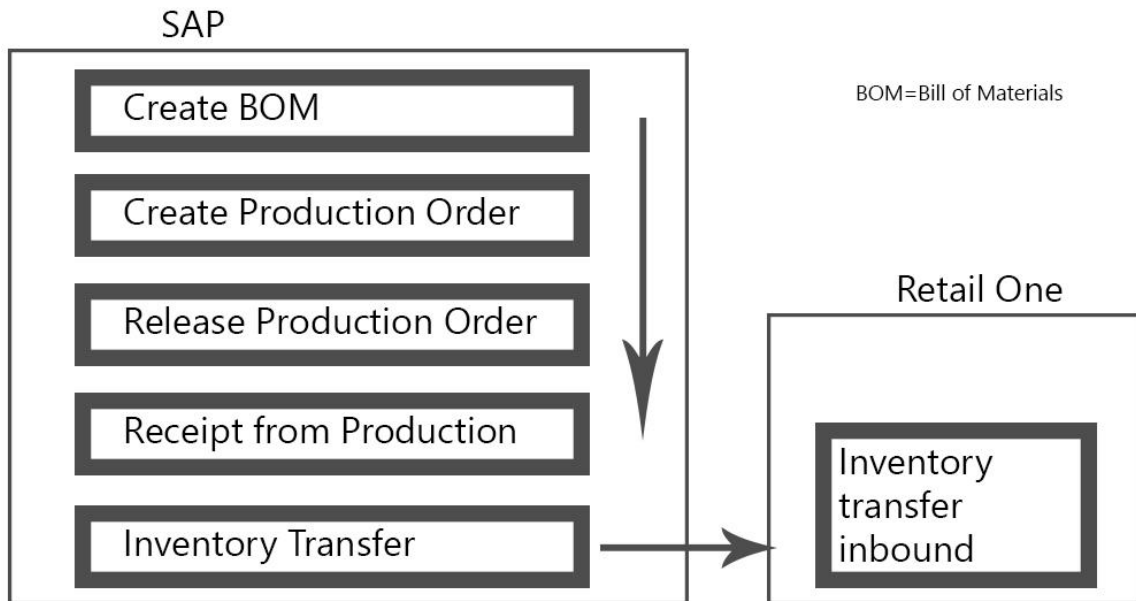

Retail One use two SAP bill of material, production and assembly.

For assembly bill of materials is automatically created, but for production is necessary execute the production.

We have two way for use bill of materials produce in SAP or in Retail One.

Bill Of Materials SAP

Bill of materials are created in SAP, Retail One read only the configuration.

Bill of Materials

Product No. X Quantity Warehouse

Product Description Price List

BOM Type Distr. Rule

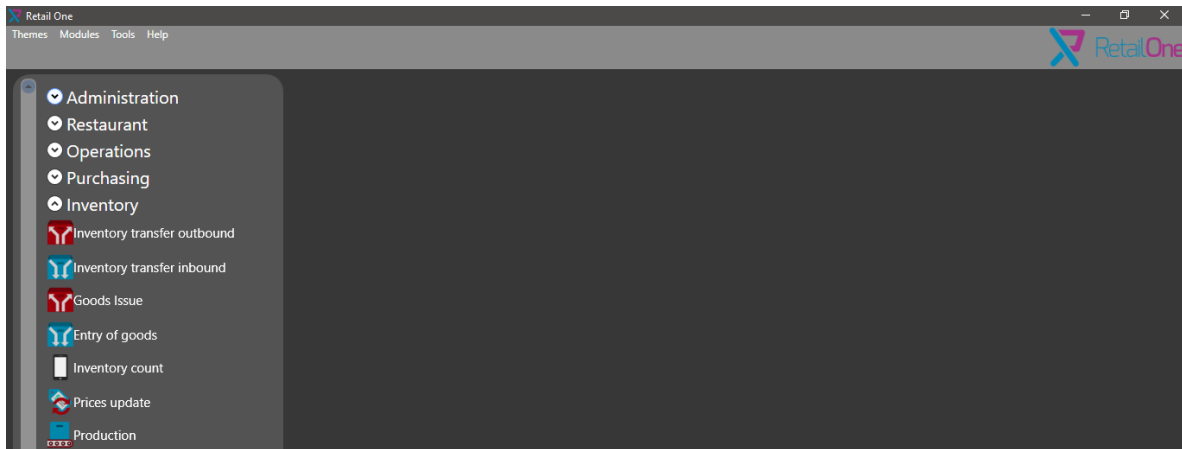

Production Std Cost Project

Planned Average Production Size

#	Type	No.	Description	Quantity	UoM Name
1	Item	CGB002	Ingredient for BOM	1	
2	Item				

Product Price

For do the production in Retail One, we access to
Inventory>Production

The first step is type the item code in text box.

Next select quantity to produce.

Also, we can change base quantity.

And click in Generate button.

A screenshot of the Retail One 'Production' screen. The window title is 'Retail One' and the subtitle is 'Production - user: 1 - Javier DUARTE'. At the top, there are input fields for 'item number' (highlighted in yellow), 'Store', 'Quantity' (set to 0.000), 'Station' (001 - Cashier), and 'Branch' (001 - Store). Below these fields is a large table with columns 'Item', 'Description', 'Base quantity', and 'Required amount'. To the left of the table is a 'Menu' panel with options: F2 - Cancel, F3 - Cant. Base, F9 - List of shortcuts, and a green arrow icon labeled 'ESC - Generate'. At the bottom of the table is a 'Comments' text area. The bottom of the window shows a navigation bar with 'Modules' and 'production' tabs.
